

TIBERIU-IOAN BOSCAN

Full Stack Software Developer

Bucharest, Romania • Phone: (+40) 732 488 392 • Email: tiberiuioan35@gmail.com
Portfolio: boscantiberiu.vercel.app • LinkedIn: linkedin.com/in/tbtiberiu • GitHub: github.com/tbtiberiu

PROFESSIONAL SUMMARY

Full Stack Software Developer with 3+ years of hands-on experience building enterprise fintech CFD trading platforms, analytical laboratory instrumentation suites, and deep learning computer vision models. Strong expertise across Java, Spring Boot, React, TypeScript, C#, Angular, and Python. Proven track record in designing modular architectures, automating CI/CD release pipelines, and actively leveraging AI coding agents to accelerate delivery.

TECHNICAL SKILLS

Programming Languages: Java, TypeScript, JavaScript, C#, Python, SQL, HTML5, CSS3/Sass

Frontend Technologies: React, Next.js, Angular, React Native, Flutter, Redux, Dockview, Tailwind CSS, Bootstrap, Figma

Backend & APIs: Spring Boot, Spring Framework, ASP.NET Core, Node.js, Express, Flask, RESTful APIs, Microservices

Cloud & DevOps: Microsoft Azure, Docker, Jenkins, GitHub Actions, Terraform (IaC), Git, Linux

Databases & Storage: PostgreSQL, MySQL, Microsoft SQL Server

AI & Machine Learning: AI Coding Agents, PyTorch, OpenCV, Vision Transformers (ViT), LoRA, YOLOv8, CNNs, Hugging Face

PROFESSIONAL EXPERIENCE

Société Générale Global Solution Centre | Bucharest, Romania (Hybrid) (February 2025 – Present)

Software Developer | February 2026 – Present

- Architected the CFD trading platform's modular workspace and dockable layout system using React and Dockview, delivering 8+ high-performance dynamic panel components.
- Co-developed real-time in-chart trading capabilities, enabling institutional clients to execute market orders and set stop-loss/take-profit triggers directly on live charts.
- Implemented multi-session state persistence for user-configured layouts, chart indicators, and analytical filters using local storage and backend REST APIs.
- Accelerated frontend migration from legacy ExtJS to React and established automated Jenkins CI/CD pipeline stages to streamline test automation and zero-downtime deployment.
- Maintained mission-critical Java & Spring Boot backend microservices, co-leading quarterly release cycles focused on security patches, dependency upgrades, and distributed system stability.

Backend Developer Intern | July 2025 – January 2026

- Developed and maintained core backend microservices for the Panther CFD trading platform utilized by institutional brokers including Commerzbank.
- Optimized end-of-day (EOD) batch processing and database routines, ensuring zero-lag state synchronization across internal ledger systems.
- Built data synchronization pipelines between internal market-making pricing engines, institutional feeds, and frontend web servers.

Frontend Developer Intern | February 2025 – July 2025

- Developed responsive, W3C-compliant React and React Native trading interfaces for mobile and web platforms.
- Optimized user journeys to reduce interaction latency on critical trading actions by up to 200ms and decreased production build size by ~12%.
- Recognized by tech leads and business analysts for delivering sprint deliverables ahead of schedule with zero defect regressions.

Waters Corporation | Braşov, Romania (Remote) (December 2022 – December 2024)

Junior Frontend Developer | December 2023 – December 2024

- Delivered feature implementations, bug fixes, and user stories across enterprise liquid chromatography applications (Alliance iS HPLC System Kiosk, Console, Method Editor).
- Collaborated with UI/UX designers and backend engineers in Agile Scrum ceremonies to translate scientific instrument workflows into modular Angular interfaces.
- Diagnosed and resolved complex frontend memory leaks and rendering bottlenecks, ensuring continuous 24/7 instrument kiosk stability.

Software Automation Intern | December 2022 – December 2023

- Developed BDD test automation suites with Python (Pytest-BDD) and C# (SpecFlow, MS Test) to validate complex chromatography software requirements.
- Overhauled diagnostic logging mechanisms for physical instruments and software emulators, boosting logging clarity, event tracking, and diagnostic speed.
- Authored technical documentation in Confluence and README guides to streamline cross-team developer onboarding.

Endava | Braşov, Romania (Hybrid)

Web Development Apprentice | August 2022 – November 2022

- Constructed full-stack web applications using React and ASP.NET Core REST APIs following clean architecture and OOP design patterns.
- Provisioned cloud infrastructure on Microsoft Azure using Terraform (IaC) and established automated CI/CD pipelines via GitHub Actions.

FREELANCE EXPERIENCE

Upwork • Freelance | Remote

UI/UX Designer & Full Stack Web Developer | February 2025 – May 2025

- Delivered 4 custom web solutions end-to-end, producing Figma design systems, interactive prototypes, and modern branding assets.
- Built responsive web applications integrating custom booking workflows, automated contact forms, and real-time client chat.
- Maintained a 100% 5-star client satisfaction rating on Upwork for clear communication, high UI fidelity, and on-time project delivery.

FEATURED TECHNICAL PROJECTS

DeForge-AI – Deepfake & AI-Generated Image Detector | PyTorch, Vision Transformers, LoRA, CNN, Flask, Docker | 2025 – 2026

- Architected a dual-branch hybrid AI pipeline combining a DINOv3 Vision Transformer with LoRA adaptation and an SRM-filtered CNN branch to detect cross-architecture visual deepfakes.
- Surpassed state-of-the-art baselines across 17 generative architectures, achieving 94.66% accuracy on the AIGC benchmark and 90.80% on synthetic face datasets.
- Deployed an interactive inference web application on HuggingFace Spaces with continuous automated testing via GitHub Actions.

Dedal's Labyrinth – Procedural Maze Generator & Solver | React, TypeScript, ASP.NET Core 8, MySQL, BFS | 2024

- Won 2nd Place at the 24-hour Hackathon organized by Politehnica University of Bucharest and SIE (Foreign Intelligence Service).
- Designed a procedural maze generation algorithm ensuring solvable paths and implemented Breadth-First Search (BFS) for real-time shortest-path visualization.
- Architected an ASP.NET Core backend following model-controller-service pattern with Entity Framework Core for relational data persistence.

Chess Snapshot – Computer Vision Chessboard Digitizer | Python, OpenCV, YOLOv8, Flask, Flutter | 2023 – 2024

- Trained a custom dual-stage YOLOv8 detection model (mAP50: 0.98, mAP50-95: 0.81) to extract physical chessboard configurations from live camera images into standard FEN notation.
- Integrated Stockfish engine evaluation via a Flask REST API connected to a cross-platform Flutter application for Android and Windows.

Nova App – Concept Vehicle Showcase & Dealership Portal | Node.js, Express, Handlebars, MySQL, Heroku | 2023 – 2024

- Built a full-stack vehicle showcase portal featuring session-based authentication, role-based access control, and dynamic relational catalog rendering.
- Configured end-to-end cloud deployment on Heroku with optimized database connection pooling and automated migration scripts.

ARduino Simulation – Augmented Reality Circuit Simulator | Unity, ARCore, C#, Mobile AR | 2023

- Developed an interactive augmented reality mobile application simulating physical Arduino circuits with interactive wire routing, LED state reactions, and in-app code inspection.
- Implemented real-time electronic simulation logic and intuitive touch/gesture interaction UX on mobile ARCore platforms.

EDUCATION

Master of Science: Advanced Techniques in Digital Imaging

Politehnica University of Bucharest (ETTI) | Final Grade: 10 / 10 | October 2024 – June 2026

Master's Thesis: DeForge-AI (Universal Deepfake Detection) • Focus: Vision Transformers, Deep Learning, Computer Vision, Digital Image Processing

Bachelor of Science: Computer Science

Transilvania University of Braşov (Faculty of Mathematics & Informatics) | Final Grade: 9.75 / 10 | October 2021 – July 2024

Bachelor's Capstone: Chess Snapshot (Computer Vision FEN Digitizer) • Focus: Data Structures, Algorithms, Software Engineering, OOP, Distributed Systems

CERTIFICATIONS & HONORS

2nd Place Winner: 24-Hour Hackathon – Politehnica University of Bucharest & Romanian Foreign Intelligence Service SIE (2024)

IBM Professional Certificate: Databases and SQL for Data Science with Python (2025)

Meta Professional Certificates: Front-End Developer Specialization, HTML & CSS in Depth, Version Control with Git (2025)

Languages: English (Full Professional Proficiency), Romanian (Native)
